

Key	Value Type	Key Description
case_id	number (integer)	Unique stable identification number.
faa_ors	string	Unique identifier for cross-reference to the Federal Aviation Administration (FAA) digital obstacle files.
faa_asn	string	Unique identifier for cross-reference to the FAA obstruction evaluation airport airspace analysis dataset.
usgs_pr_id	number (integer)	Unique identifier for cross-reference to the 2014 USGS turbine dataset.
eia_id	number (integer)	Plant ID from Energy Information Administration (EIA).
t_state	string	State where turbine is located.
t_county	string	County where turbine is located.
t_fips	string	State and county fips where turbine is located, based on spatial join of turbine points with US state and county.
p_name	string	Name of the wind power project that the turbine is a part of. Project names are typically provided by the developer; some names are identified via other internet resources, and others are created by the authors to differentiate them from previous projects. Values are that were unknown were assigned a name based on the county where the turbine is located.
p_year	number (integer)	Year that the turbine became operational and began providing power. Note this may differ from the year that construction began.
p_tnum	number (integer)	Number of turbines in the wind power project.
p_cap	number (float)	Cumulative capacity of all turbines in the wind power project in megawatts (MW).
t_manu	string	Turbine manufacturer - name of the original equipment manufacturer of the turbine.
t_model	string	Turbine model - manufacturer's model name of each turbine.
t_cap	number (integer)	Turbine rated capacity - stated output power at rated wind speed from manufacturer, ACP, and/or internet resources in kilowatts (kW).
t_hh	number (float)	Turbine hub height in meters (m).
t_rd	number (float)	Turbine rotor diameter in meters (m).
t_rsa	number (float)	Turbine rotor swept area in square meters (m ²).
t_ttlh	number (float)	Turbine total height from ground to tip of a blade at its apex in meters (m).
t_offshore	number (integer)	Indicator of whether the turbine is offshore. 0—indicates turbine is not offshore. 1—indicates turbine is offshore.
t_retrofit	number (integer)	Indicator of whether the turbine has been partially retrofit after initial construction (e.g., rotor and/or nacelle replacement). 0 indicates no known retrofit. 1 indicates yes known retrofit.
t_retro_yr	number (integer)	Year in which the turbine was partially retrofit.

Key	Value Type	Key Description
t_conf_atr	number (integer)	Level of confidence in the turbine attributes. 1—No confidence: no attribute data beyond total height and year, 2—Partial confidence: incomplete information or substantial conflict between, 3—Full confidence: complete information, consistent across multiple data sources.
t_conf_loc	number (integer)	Level of confidence in turbine location. 1— No turbine shown in image; image has clouds; imagery older than turbine built date, 2— Partial confidence: image shows a developed pad with concrete base and/or turbine parts on the ground, 3— Full confidence: image shows an installed turbine.
t_img_date	number (integer)	Date of image used to visually verify turbine location. Note if source of image is NAIP, the month and day were set to 01/01.
t_img_src	string	Source of image used to visually verify turbine location.
xlong	number (float)	Longitude of the turbine point, in decimal degrees.
ylat	number (float)	Latitude of the turbine point, in decimal degrees.
